

# Advisory Services

Our advisory services accelerate your development of business transformation capability along all its dimensions.

Wherever your organization is at in terms of developing new-millennium agility, **continuous transformation is your 'new normal'** – It's not a one-time event, or a phase, and this is a shift in thinking that organizations are now recognizing.

In fact, not adapting quickly enough is fast becoming the number one risk factor in remaining viable in the long term.

Designed for leaders, teams and BTOs, iMind advisory combines staged education, with coaching and expert advice

iMind methods are like nothing on the market today. They address not only the need for speed and the inevitability of limited funding, they...

- ✓ directly increase your ability to navigate the sea of unknowns associated with transformation;
- ✓ equip you to manage a recurring lifecycle of business transformation; and
- ✓ deliver the organization value and belief system alterations associated with doing business in the new millennium.

Combined with the depth of hands-on experience in business architecting, enterprise systems development, and implementation, transformation program management, and organizational change management that we bring to your context, your transformation is covered from every angle.
